Corrigendum

Corrigendum to "A graph vertex-coloring-based parallel block coordinate descent method for solving the traffic assignment problem" [Trans. Res. Part C (2026) 105439]

Kai Zhang [a], Zhiyuan Liu [b], Honggang Zhang [c], Yicheng Zhang [b], Yuk Ming Tang [a], Xiaowen Fu [a,*]

The authors regret that the following errors appeared in the published article. The corrections are provided below.

1. The title of Table 3, "Four transportation networks", should be corrected to "Five transportation networks". The corresponding description should be revised to "Five open-source transportation networks were tested".
2. An error was identified in the published version of Fig. 13(c), and the correct version of Fig. 13(c) is provided below.
3. In Section 3.2.1, "block overlaps rather than" should be changed to "block number, namely,".
4. In Section 4.2.3, the last sentence of the third paragraph duplicates the following paragraph and should be deleted: "Since LDF is used solely to prepare inputs for the subsequent UE algorithm, we do not include LDF runtime in the reported UE runtime."
5. In the second paragraph of Section 4.2.4, "as shown in Fig. 15(b)-(d)" should be replaced with "as shown in Fig. 16(b)-(d)".
6. The values of "Used time (Second)" and the corresponding speedups for the Ana, CS, and Birm networks in Table 6 were partially incorrect and did not match panels (a), (b), and (c) of Fig. 15. The corrected values under path overlap thresholds of 0.7, 0.8, and 0.9 are as follows: for the Ana network, the used times are 0.21, 0.22, and 0.13, with speedups of 1.67, 1.59, and 2.69, respectively; for the CS network, the used times are 0.65, 1.70, and 5.00, with speedups of 1.32, 0.51, and 0.17, respectively; for the Birm network, the used time is 8.32 at a path overlap threshold of 0.7, with a speedup of 3.08, while the values under path overlap thresholds of 0.8 and 0.9 remain unchanged. Accordingly, in the second paragraph of Section 4.2.3, the first sentence should be revised as follows: "As observed in Table 6, when the path overlapping rates were 0.8 and 0.9, a deceleration effect was observed in the CS network. In contrast, speedups were achieved in the Ana, Birm, and Phi networks."
